## 1. Introduction

With the “Toppan Declaration on the Global Environment” as the fundamental concept, we at the Electronics Division of Toppan Printing Co., Ltd. (the “Division”) have been endeavoring to reduce burdens on the environment in our business operations while providing customers with products on which they can rely with confidence.

Recently, Ver.4.5.1 of "Toppan Group Control Standards for Chemical Substances in Raw Materials" has been issued. Accordingly, Electronics Division has updated “The Green Procurement Guidelines of the Electronics Division (Ver. 13)”.

In this regard, the Division revised a part of “The Green Procurement Guidelines of the Electronics Division” in order to promote further reduction of environmental loads, which may arise from our products and business operations, through continuing cooperation with our valuable suppliers. We will continue to promote the reduction of environmental burden generated by products and business activities through collaboration with all our suppliers.

This Green Procurement Policy is to be applied as a part of our environmental management system and quality management system and will be continuously controlled and maintained.

Your understanding and continued support are greatly appreciated.

## 2. The Green Procurement Guidelines of the Electronics Division, Toppan Printing Co., Ltd.

The Green Procurement Guidelines of the Electronics Division, Toppan Printing Co., Ltd. (hereinafter referred to as the “Guidelines”) were compiled based on the Green Procurement Policy of the Division, and their purpose is to mitigate any environmental burden from products that are manufactured by the Division as well as its business activities, and to provide detailed procedures regarding Green Procurement to our valuable suppliers.

This Guidelines is to be applied to procurement of every material including raw materials and production equipments for electronics related products, intermediate materials to be used in the processes as well as development, and packing materials that the Electronics Division of Toppan Printing Co., Ltd. or any of its affiliates procures from suppliers.

The contents of these Guidelines may be changed or added to from time to time in accordance with the changing requirements of our customers and social circumstances such as changes in trends in the industry. Any updated versions will be provided to our suppliers.

## 3. Terminology Used in These Guidelines

**JAMP:** Joint Article Management Promotion-consortium

JAMP manages information on chemical substances contained in an article appropriately and aims to establish and disseminate the concrete system to disclose and transmit the information through companies on supply chain smoothly.

**Homogeneous material:** a material that cannot be mechanically disjointed into different materials. The term “homogeneous” means “of uniform composition throughout.” Examples of “homogeneous materials” are individual types of plastics, ceramics, glass, metals, alloys, paper, board, resins and coatings.

**Intentionally added:** Deliberate use in the formulation of a product or subpart where its continued presence is desired to provide a specific characteristic, appearance or quality. If listed materials or substances are contained in products or subparts purchased by a supplier and are incorporated, such materials/substances must be disclosed if the supplier has knowledge (or with reasonable inquiry should have knowledge) of the presence of such materials or substances.

**Material:** A material is made up of one or more substances (e.g., an alloy is a material, which in turn, is made up of two or more different elements.).

**Product:** A product is a chemical product, a part or an end product which is delivered to a customer as the outcome of business activities of the organization.

Note: Under the EU REACH regulation (Registration, Evaluation, Authorization and Restriction of Chemicals) product would be called “article”.

**Reportable application:** The intended use of a substance which determines its relevance to a given scope and threshold for disclosure.

Note: This use is defined in the scope of the underlying law or industry standard. Examples are batteries, textiles, wood etc.

**Substances:** Substances are chemical elements and their compounds (e.g., lead (chemical element), lead oxide (compound), polyvinyl chloride (compound). In order to identify hazardous substances which have Registry numbers (RN) of the Chemical Abstracts System of the American Chemical Society (“CAS” numbers) and / or EINECS numbers, reference numbers used by the European Commission (EC numbers) are assigned to all chemical elements and most of their compounds and should be used for their identification. CAS numbers or EC numbers are provided (from Annex A to AM) if these numbers are publicized.

**Threshold level:** Concentration level which defines the limit (at or) above which the presence of a substance or material in a product or subpart must be declared based on the requirements of this guide.

## 4. Requirements for Suppliers

We require our suppliers to comply with the following requests to enable us to implement Green Procurement:

### 4-1 The construction of environmental management systems and chemical substance control systems

In order to promote environmental activities not just in the business activities of Toppan Printing but throughout the supply chain, we ask for the construction of environmental management systems at suppliers.

We also ask for the construction of chemical substance control systems for the appropriate management of chemical substances in materials and products.

Environmental management systems : The construction of systems compliant with the specifications and requirements of ISO14001:2015

Chemical substance management systems : The construction of systems in line with the JAMP<sup>\*1</sup> “Guidelines for the Management of Chemical Substances in Products”<sup>\*2</sup>

(In addition to management of chemical substances in products at your company, we ask for the construction of a management system that includes your company’s suppliers.)

### 4.2 Disclosure of situation concerning inclusion of chemical substances

Every supplier is required to submit data on all the substances contained in materials that the Division procures for the purpose of using in our products, new products under development, intermediate materials to be used in manufacturing processes or development, packing materials, and the substances contained in manufacturing equipment that the Division procures for the purpose of manufacturing our products.

The manufacturing equipment covers the portions which are in direct or indirect contact with our products. The details will be determined and reflected in specifications after separate discussions.

In cases where it is difficult technically or socially to ascertain the situation regarding chemical substances in the above materials, Toppan Printing may request individual discussions.

## 4.2.1 Substances to be investigated

We have established our own criteria for the chemical substances to be investigated in this guideline, chemSHERPA Declarable Substances Reference List, and “Toppan Group Control Standards for Chemical Substances in Raw Materials”.

**Prohibited Substances (Table 1):** Substances that must not be present in supplied products including raw materials.

In case that no substitute exists or use of certain restrict substances is legally admitted, the Division may permit use of such substance present in supplied products depending on the condition and location, based on consultation with Toppan Group. However, suppliers shall make efforts to reduce or replace such substances.

\*Note 3 : Identification methods are indicated in 4-2-2.

\*Note 4 : None of the specified amine out of 24 types never be exceeded the threshold.

\*Note 5 : If “—” is indicated in the “Intentionally added” column, the substances could be used but reduction/replacement of that substances would be recommended.

\*Note 6 : Weight of metal Sn of 0.1% (1,000ppm) in the material is the threshold.

\*Note 7 : If controlled substances and prohibited substances are overlapped, prohibited substances will prevail.

\*Note 8 : Substances defined not only by "Toppan Group Control Standards for Chemical Substances in Raw Materials", but from a standpoint of the Electronics Division.

Determination of “contains”

- For groups of chemical substances where “-” is recorded for the threshold level, where there is intentional addition the item will be determined to “contain” the substance. On each product please disclose the mass in “g” and added volume in “ppm”.
- For groups of chemical substances where the threshold level is recorded as “○○ppm”, regardless of whether there is intentional addition or not, if there is a target chemical substance present exceeding the threshold level, including impurity concentration, the item will be determined to “contain” the substance. For each homogenous material of a product, please disclose the mass of the homogenous material in “g” and the volume contained in “ppm”.

Determination of “does not contain”

- In cases other than the abovementioned, the item will be determined to “not contain” the substance. For groups of chemical substances where the threshold level is recorded as “○○ppm”, in order that the product can be recorded as “not containing” the substance, it must be scientifically verified that the threshold level is not exceeded via the result of analysis or similar means.

Response to national legislation and additional EU SVHC

- Substances whose manufacture / usage are additionally prohibited by revised national legislation before the revision of these standards shall be treated as prohibited substances.
- When EU REACH Substances of Very High Concern (SVHC) are added in Candidate List, they shall be treated as “controlled substances” (as a rule, threshold shall be 1,000ppm, Identification method shall be according to ⑦).

(Refer to <http://echa.europa.eu/candidate-list-table> for SVHC Candidate List.)

**Exemption of prohibited substances**

In consideration of business content, and technical and economic factors, procurement restrictions may not be applicable in cases where exclusion or substitution is difficult. For known uses, exemptions are stipulated for each group of substances.

Details on requisites for exemption are provided in Table 3.

Table 3  
Requisites for exemption for containing prohibited substances\*9

Substance/Category	Requisites for exemption
Cadmium/ Cadmium compounds	-Used for filter glasses or glasses for standard light reflection. -Used for plating electrical contact
Hexavalent Chromium/ Hexavalent Chromium Compounds*10	For the purpose of -Plating -Etching -Photo-resist
Lead/Lead Compounds	-Steel material or lead plating steel with a lead content less than 0.35wt% -Aluminum material with a lead content less than 0.4wt% -Copper alloy with a lead content less than 4wt% -High-melting solder for interconnection (lead solder with a lead content in excess of 85wt%) -Optical glasses -Filter glasses or glasses for standard light reflection -Semiconductor-die of IC packages (FCBGA) and plating for electric interconnection between carriers

\*Note 9: In addition to Table 3 above, those that were exempted in 2011/65/EU will also be exempt

\*Note 10: Hexavalent chromium compound(above use application) is not applicable because they are technically difficult to substitute in Electronics division.

## 4.2.2 Identification method

Identification method: Measure content concentration a homogeneous material unit, with the following method.

No.①: Check of there being no intentional addition

No.②: Substance would be measured by Geiger counter, etc.

No.③: Refer to EN717-1:2004, EN120:1992, JIS A 5905:2003, JIS A 5908:2003, JIS A 1460:2001

No.④: Refer to IEC62321 Ed.1

No.⑤: Refer to ISO 24362:2014, ISO 17234-1:2010, ISO 17234-2:2011, EN 14362:2012, JIS L 1940-1:2014, JIS L 1940-3:2014, LMBG 82.02(DGF Standard Methods)

No.⑥: Analysis method for food packaging complies with the Specifications and Standards for Foods and Food Additives, etc. in Ministry of Health and Welfare Notification No. 370, and the standards for plastics containers/packages stipulated in the Ministerial Ordinance on Milk and Milk products Concerning Compositional Standards, etc. (Ministry of Health and Welfare Ordinance No. 52). Analysis method for toys complies with European standard EN 71-3 specifying safety requirements for toys. The threshold values used for the analysis method above are also in accordance with specifications and standards stipulated in related regulations respectively

No.⑦: Calculation is made on suppliers' materials using (M)SDS . Confirm a value at maximum.

No.⑧: Refer to JIS L 1041:2011

No.⑨: Refer to IEC 62321 part 8

No.⑩: Measured using analysis method compliant with GS2014:01PAK (German official method)

(Table a) Precision analysis method for ten substances restricted by RoHS Directive

Substance	kind of sample	Precision analysis		IEC 62321 Reference
		Pretreatment	analysis method	
Cadmium / Cadmium compounds Lead / Lead compounds	Polymer	Incineration Acid decomposition (Cadmium)	ICP-OES ICP-MS AAS	Part 5

### 4.3 Promotion to eliminate inclusion of restricted substances

- With regard to all materials, including raw materials, to be used in products or new products under development, intermediate materials to be used in manufacturing or development and packing materials, as well as manufacturing equipment that contain particular investigated substance, the Division will perform further review to eliminate some substances if necessary.
- Therefore, based on the results of investigation, the Division may ask suppliers to develop alternative materials or switch to an alternative material. In the process we will make our best efforts in good faith and we hope every supplier thoroughly understands and cooperates with the Green Procurement Policy of the Division.

### 4.4 Assurance of non-inclusion of restricted substances

In the case that a supplier can guarantee non-inclusion of the restricted substances in raw materials that the Division procures to be used in our products or products under development, intermediate materials to be used for manufacturing processes or development, packing materials, etc., such supplier will be asked to guarantee non-inclusion of the controlled substances.

However, non-inclusion of restricted substances can be guaranteed when the following requirements are satisfied.

- No restricted substance is intentionally added (by design).
- Contents of restricted substances of which threshold values are set forth are less than the threshold value including impurities.
- A green procurement policy is in place, and the raw materials are sufficiently controlled.
- There is no risk of contamination within the processes of the supplier.
- With regard to RoHS Directive related substances, non-inclusion can be scientifically proved with analysis data or other means.

### 4.5 Promotion of continuous research

We are determined to continuously promote control of restricted substances through Green Procurement. In addition to chemical substances cited in these guidelines as subject to investigation or prohibition, there are cases where separate or individual investigations are requested in response to trends in laws and regulations or the demands of Toppan Printing's customers. We kindly ask for your cooperation in such situations.

## 5. Control of Information Disclosed by Suppliers

Any information disclosed by our suppliers will be managed with responsibility and will not be disclosed to any third party except for in the case of a legal order by the government or law, or for the purpose of using it in the quality assurance of our products as a result of a request by a customer.

## 6. Validation Timing of Green Procurement

Our Green Procurement has been applied since June 23, 2005, when the "Green Procurement Policy of the Electronics Division of Toppan Printing Co., Ltd." was established.

## 7. The handling of these guidelines

These guidelines are provided to new suppliers by the relevant purchasing department at Toppan Printing when transactions are commenced. They are provided in the same way when revisions have been made.

## 8. Inquiries

For inquiries concerning the Division's Green Procurement, please contact:

## Annex A to AM (Informative) Detailed Substance Lists with CAS Numbers and/or EC Numbers

These lists are typically not comprehensive; they represent examples of chemicals listing CAS numbers and/or EC numbers if applicable or available.

**Table A – Asbestos**

Asbestos	CAS Numbers
Asbestos	1332-21-4
Actinolite	77536-66-4
Amosite (Grunerite)	12172-73-5
Anthophyllite	77536-67-5
Chrysotile	12001-29-5
Crocidolite	12001-28-4
Tremolite	77536-68-6

**Table B – Azocolourants and azodyes which form certain aromatic amines**

Certain Aromatic Amines	CAS Numbers
4-Aminobiphenyl	92-67-1
Benzidine	92-87-5
4-Chloro-2-methylaniline	95-69-2
2-Naphthylamine	91-59-8
o-Aminoazotoluene	97-56-3
5-Nitro-o-toluidine	99-55-8
p-Chloroaniline	106-47-8
2,4-Diaminoanisole	615-05-4
4,4'-Methylenedianiline	101-77-9
3,3'-Dichlorobenzidine	91-94-1
3,3'-Dimethoxybenzidine	119-90-4
3,3'-Dimethylbenzidine	119-93-7
4,4'-Diamino-3,3'-dimethyldiphenylmethane	838-88-0
6-Methoxy-m-toluidine	120-71-8
4,4'-Methylene-bis(2-chloroaniline)	101-14-4
4,4'-Oxydianiline	101-80-4
4,4'-Diaminodiphenylsulfide	139-65-1
o-Toluidine	95-53-4
4-Methyl-m-phenylenediamine	95-80-7
2,4,5-Trimethylaniline	137-17-7
o-Anisidine	90-04-0
4-Aminoazobenzene	60-09-3
2,4-Dimethylaniline	95-68-1
2,6-Dimethylaniline	87-62-7

Note: Applies to azocolourants and azodyes that by reductive cleavage of azo groups may release one or more of the above 24 aromatic amines.

**Table C – Cadmium/Cadmium compounds**

Cadmium/Cadmium compounds	CAS Numbers
Cadmium	7440-43-9
Cadmium oxide	1306-19-0
Cadmium sulfide	1306-23-6
